

# Nordic Wind Technology chosen to provide Suzlon retrofit solution in Spain

6 March 2021

Nordic Wind Technology has signed an agreement to retrofit 89 Suzlon S-88 turbines in Spain.

The turbine software from Nordic Wind Technology will be installed during 2021 and will provide a completely new control environment for the S-88 turbines connection to the Siemens Gamesa Renewable Energy (SGRE) SCADA solution. This will allow SGRE full monitoring of the turbine data in order to reduce maintenance cost, optimize operations and increase profitability.

SGRE is one of the leading multibrand wind turbine service & maintenance companies worldwide and has several Suzlon S-88 wind turbines in its service portfolio.

The turbine software from Nordic Wind Technology ensures that SGRE's service technicians can access the wind turbine controller in order to perform the scheduled service and maintenance.

As the wind industry progresses with a rapid pace, it is critical that older turbines are equipped to meet today's control and performance standards. Retrofitting older turbines with new and field-proven control technology can effectively increase the turbine's annual energy production, heighten the availability and provide modern remote access. In combination with renewed access to spare parts, the turbine's lifetime can be extended with better profitability.

*"With our software systems we are able to retrofit turbines based on Bachmann controllers. We deliver a retrofit upgrade to current industry standard with a modern control and surveillance availability with full access to all data, enabling remote access, improved surveillance and servicing of the turbines,"* says Steffen Larsson, CTO at Nordic Wind Technology.

With a mission to deliver independent OEM controller software and make wind power more efficient and competitive, Nordic Wind Technology is determined to develop innovative retrofit solutions for the aftermarket. Having an already well proven Suzlon S-88 controller software retrofit solution, there was a good match between SGRE's needs and Nordic Wind Technology's solution.

*"Working together with SGRE on this project has been a great pleasure for us. As we continuously strive to be innovative and deliver a superior service, we look forward to growing this business,"* says Jorgen Kjaersgaard, CEO, Nordic Wind Technology.

## About Nordic Wind Technology

At Nordic Wind Technology we are specialized in developing and optimizing turbine software. Our combined extensive professional experience working with the global wind industry is based in Denmark. We design, develop and program turbine control software systems. Our team ensures best efforts and leading edge retrofitting solutions for our partners – give the power back.
